Project proposal for "in den urbaned Raum" <http://goestourbanspace.wordpress.com/>

Title: "project swancam" Version 1: "bird's eye view"

"birds eye view" represents a series of photographic perspectives from the point of view, of a swan. If we develop a multimedia program, I would create a a projected situation so that the photographic perspective may fade slowly to a blur and the back again to representational photography. If the exposition of our artwork is a static, then I propose to hang – illuminated photographs, juxtaposed to advertisements.

An example of this animated version can be seen at <http://goestourbanspace.wordpress.com/2007/10/10/animated-walls/>

These images represent the some of the possibilities of photographic perspectives.
